(54) Title: SYSTEM AND METHOD FOR OPTIMIZATION OF VESSEL CENTERLINES

(57) Abstract: Methods are provided for optimizing a vessel centerline in a digital image. For instance, a method includes providing a digital image of a vessel wherein said image comprises a plurality of intensities corresponding to a domain of points in a D-dimensional space, initializing a centerline comprising a plurality of points in the vessel (step 20), determining a cross section of the vessel at each point in the centerline (step 21), evaluating a center point for each cross section of the vessel (step 22), and determining a refined centerline from the center points of each cross section (step 23).

* Special categories of cited documents:	
"A" document defining the general state of the art which is not considered to be of particular relevance	"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"E" earlier application or patent published on or after the international filing date	"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"O" document referring to an oral disclosure, use, exhibition or other means	"&" document member of the same patent family
"P" document published prior to the international filing date but later than the priority date claimed
